

Q) create a structure variable student and estimate the size of structure manually then write a C-program to find size of structure using size of a operations. Now observe both the outputs are they same or different justify your answer

A) struct question
#include <stdio.h>
struct student

{
int roll no;
char name[20];
float marks;

};

int main ()

{
struct student s;
printf ("size of structure = %d bytes\n",
size of (s));

return 0;

}

output:- size of structure = 28 bytes

manual size:-

∴ Both are equal
no extra padding is needed.
